# HUMIDITY CONTROL FOR HOT YOGA

Humidification, Dehumidification and Evaporative Cooling

## HEAT AND HUMIDITY IN PERFECT BALANCE

We've worked with enough hot yoga studios to know how important it is to balance heat and humidity for an optimal yoga environment. Dry air is one of the biggest culprits of student complaints, yet many studios continue to use basic floor units that simply can't meet the demands of a hot room. These dry, uncomfortable conditions can have a negative impact on repeat business. Is your studio suffering from too little humidity?

### Consistent, reliable humidity leads to repeat business

For many Condair customers, just having a system they can rely on makes all the difference. They report fewer breakdowns and maintenance issues with Condair humidifiers, known for their superior quality and customer service. Our clients also love the fact they can turn the Condair unit on just 30 minutes before a class to get the room to the right humidity level. Whether you have hundreds or thousands of students coming through your doors each month, having the optimum level of humidity is key to ensuring new and repeat business.

"With Condair, we have a state-of-the-art humidifier that is far superior to anything you plug into the wall," says Elaina Zorensky, co-owner of Bikram Yoga Tempe in Tempe, Arizona.

"The feedback our instructors have been getting is excellent. And our new student retention rate is at the highest it has ever been."

# CREATE AN OPTIMAL HOT YOGA EXPERIENCE

## No other humidifiers stack up

When you switch to a Condair humidifier, you will notice the difference in your studio almost immediately. Ideal for changing environments like yoga studios, where every student's body generates heat and moisture, Condair systems responds quickly to these changes while maintaining the relative humidity set point. This helps students to start sweating right away so their muscles can relax and they can focus on their practice, injury-free.

### EL Series

Our electrode steam humidifier provides pure steam to your duct or space. The touchscreen control panel offers an intuitive interface for selecting setpoints, monitoring the humidifier, and accessing diagnostic reporting. It seamlessly integrates with Building Management Systems (BMS) and features disposable cylinder technology for easy replacement.

### RS Series

Our resistive steam series includes the patented 'Scale Management System' for efficient scale prevention. The RS model connects to duct systems or offers a Direct Room System for precise control. The touchscreen control panel displays machine status and allows for easy setpoint adjustment and troubleshooting.
