

Softener

Optimal water treatment first of all requires the softening of the humidifying water. A softener performs this task reliably.

Reverse osmosis

A reverse osmosis system supplies mineral-free humidifying water.

Condair DL control unit

The control unit is the heart of the Condair DL hybrid humidifier. The control and regulating operations take place there.

Condair DL HygienePlus®

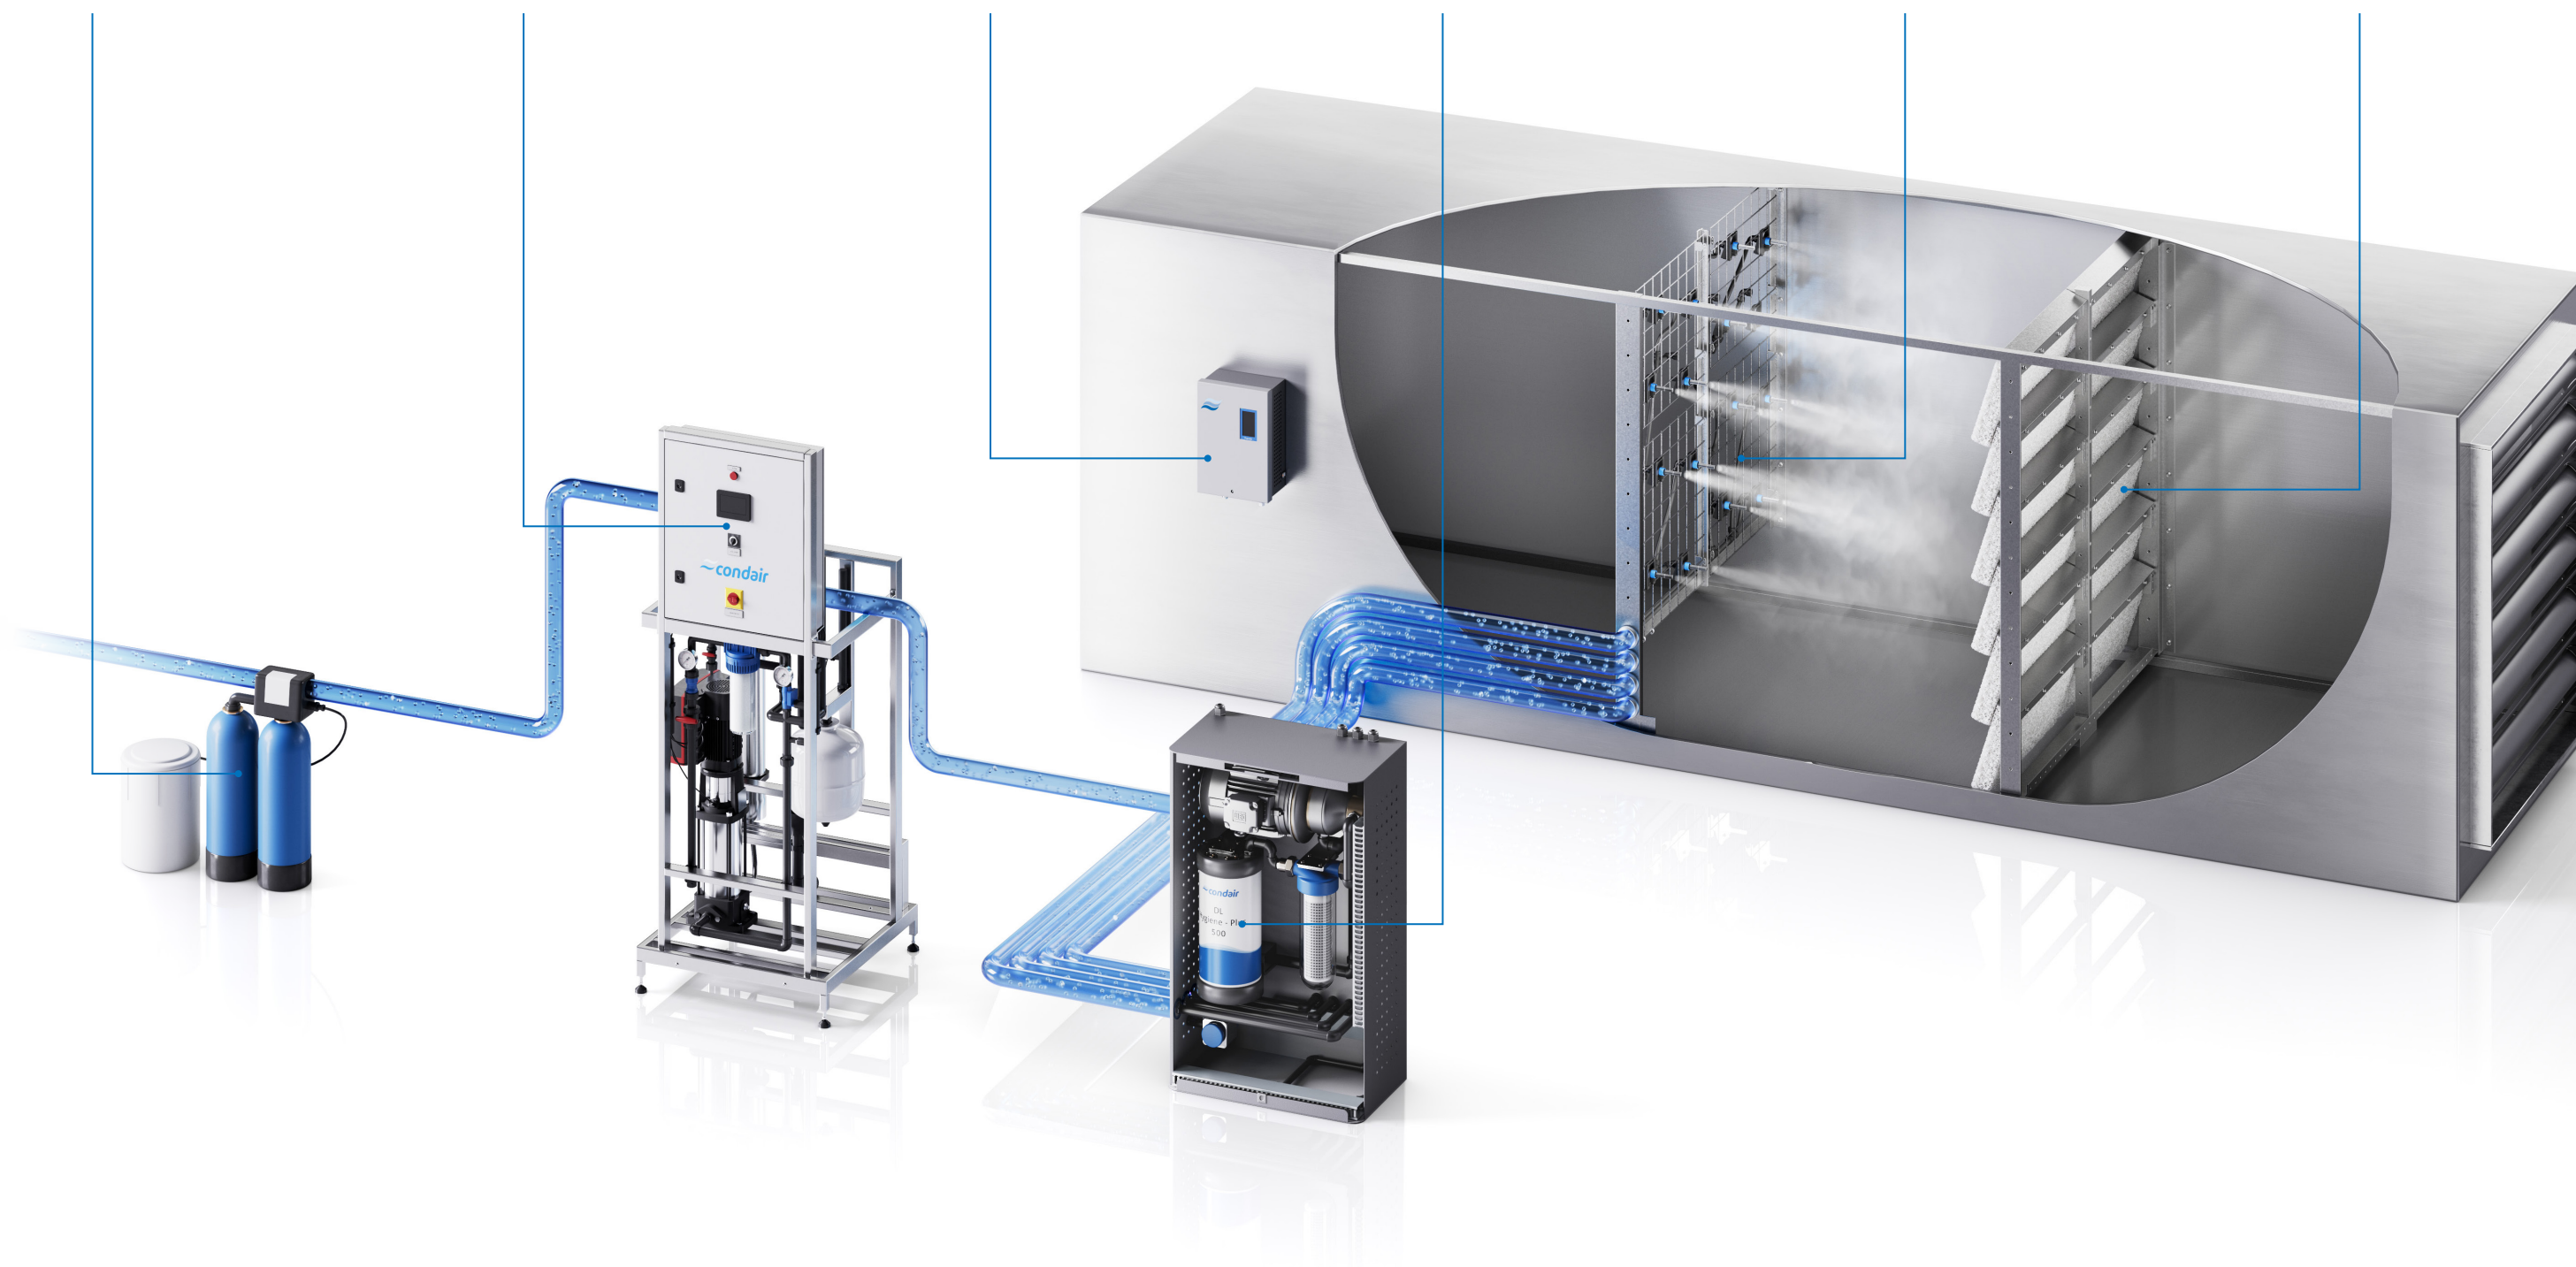

The HygienePlus® silver ionization and the optional sterile filter are used as preventative hygiene measures and offer lasting hygiene safety.

Condair DL atomizer unit

The optimal layout of the atomizing nozzles ensures uniform humidity distribution. Electrical current consumption is low because of the low-pressure operation.

Condair DL evaporator unit

The patented ceramic evaporator unit maximizes use of the valuable humidifying water. The separating efficiency of the ceramic ensures hygienic operation.

Condair **DL Series**
Hybrid Humidifier
